

Vladislav Potapov

Senior Software Engineer

✉ potapowvlad@gmail.com [Telegram](#) [LinkedIn](#) [GitHub](#)

Summary

Frontend engineer with 5 years of experience building scalable web applications (SPA, SSR, SSG) using modern JavaScript/TypeScript frameworks. Proven expertise in technical leadership, CI/CD implementation, and deploying solutions in AWS environments. Currently focused on enhancing architectural skills and leveraging cloud technologies.

Key Skills

TypeScript React Redux
GraphQL Next.js AWS
Jenkins Terraform

Languages

- Russian - Native
- English - B2

Education

Master in Software Engineering

[ITMO University](#)

🕒 2019-2021

📍 Saint Petersburg, Russia

Bachelor in Information Systems and Technologies

[ITMO University](#)

🕒 2015-2019

Work Experience

Senior Software Engineer

[EPAM Systems](#)

🕒 Feb 2024 – present 📍 Belgrade, Serbia

A set of web applications and services for managing and transporting chemical substances between medical research laboratories.

Achievements

- Led a team of 3 frontend developers, delivering and maintaining key React and Next.js applications
- Built a unified CI/CD pipeline using Jenkins and Terraform for seamless deployment of all frontend apps to AWS ECS
- Initiated and led the migration of two legacy applications to a modern tech stack (React + Redux)
- Proposed and scoped a new web application, which was approved by the client and moved to active development

Tech stack

React Next.js Redux Jenkins Terraform AWS TypeScript

Senior Frontend Developer

[EPAM Systems](#)

🕒 Dec 2022 – Mar 2024 (1 yr 4 mos) 📍 Istanbul, Turkey

Set of web applications for modeling relationships between database entities in medical research labs (e.g., Animal → has → Cage → has → Number) using a tree-graph editor. The system also enables entity creation and editing within connected databases.

Achievements

- Defined the tech stack and organized a monorepo (Yarn workspaces) with a custom UI Kit, speeding up development across apps
- Developed a performant canvas-based (React-flow) tree graph editor for modeling complex relationships
- Integrated Azure Active Directory for secure authentication across all applications

Tech stack

React Apollo GraphQL React-flow Azure AD TypeScript

Middle Frontend Developer

EPAM Systems

🕒 Nov 2021 – Dec 2022 📍 St. Peterburg, Russia (1 yr 2 mos)

Web application for detecting diseases in CT and X-ray scans using a neural network.

Achievements

- Developed a universal system for rendering forms and tables based on JSON schemas, improving reusability and maintainability
- Created a DICOM web viewer (Cornerstone.js) for comparing, annotating, and analyzing medical scans
- Refactored and optimized architecture to improve component reuse and page load times

Tech stack

React

Next.js

Redux

Cornerstone.js

React Final Form

TypeScript

Junior Frontend Developer

EPAM Systems

🕒 Nov 2020 – Dec 2021 (1 yr 2 mos) 📍 St. Peterburg, Russia

Web application for tracking chemical shipments between research labs. The goal was to rewrite a legacy Marionette + Backbone app with modern technologies and improve performance.

Achievements

- Actively contributed to the technology stack selection (React, Redux, Recoil) and architecture planning
- Implemented full test coverage with Cypress (e2e) and RTL (unit tests)
- Participated in the development cycle from planning to production release

Tech stack

React

Redux

Recoil

Cypress

TypeScript

Intern

EPAM Systems

🕒 Jul 2020 – Oct 2020 📍 St. Peterburg, Russia

Web app for tracking people movement within buildings.

Achievements

- Expanded real-time tracking functionality using WebSockets
- Unified the application architecture to support different map providers (OSM, Google Maps API)
- Integrated OpenStreetMap provider

Tech stack

React

Redux

Google maps API

OSM
